

EXPERIMENT NO:1

1.Create a simple cloud software application for Flight Reservation System using any Cloud Service Provider to demonstrate SaaS

Aim

To create a simple **Flight Reservation System** as a cloud-based software application using **Zoho Creator** to demonstrate the **Software as a Service (SaaS)** model, allowing users to enter passenger details, select flight details, check seat availability, and calculate the reservation cost through an online application.

Procedure

1. Login to Zoho Creator

- Open [Zoho Creator](#).
- Sign in using a Zoho account.
- Create a new application.

2. Create the Flight Reservation Application

- Select **Create Application**.
- Give the application name as **Flight Reservation System**.
- Choose a blank application to create the required forms.

3. Create the Flight Details Form

- Create a form named **Flight Details**.
- Add fields such as:
 - Flight ID
 - Airline Name
 - Source
 - Destination

- Travel Date
- Departure Time
- Arrival Time
- Seat Capacity
- Available Seats
- Ticket Price

4. Create the Passenger Reservation Form

- Create another form named **Flight Reservation**.
- Add fields:
 - Passenger Name
 - Age
 - Gender
 - Phone Number
 - Email
 - Flight ID
 - Travel Date
 - Number of Seats
 - Ticket Price
 - Total Cost
 - Reservation Status

5. Enter Sample Flight Details

- Add some flight records to the Flight Details form.
- Example:
 - Flight ID: FL101

- Source: Chennai
- Destination: Bangalore
- Available Seats: 20
- Ticket Price: \$100

6. Calculate the Total Cost

- Use **Deluge Script** in Zoho Creator to calculate the total reservation cost.
- The calculation is:

Total Cost = Number of Seats × Ticket Price

7. Check Seat Availability

- Add a validation using Deluge Script.
- If the requested number of seats is greater than the available seats, display:

"Seats are not available."

- Otherwise, allow the reservation to proceed.

8. Update Seat Availability

- After a successful reservation, reduce the available seat count according to the number of seats booked.

9. Create a Reservation Report

- Create a report to display all reservations.
- The report can contain:
 - Passenger Name
 - Flight ID
 - Source
 - Destination

- Travel Date
- Number of Seats
- Total Cost
- Reservation Status

10. Test the Application

- Enter passenger details.
- Select a flight.
- Enter the number of seats.
- Check whether seats are available.
- Verify the total cost.
- Submit the reservation and verify that the reservation appears in the report.

11. Deploy as a Cloud Application

- Zoho Creator hosts the application on the cloud.
- Users can access the application through the internet without installing the application locally.
- This demonstrates the **SaaS model**, where the complete software application is provided as an online service.

The screenshot shows a web browser displaying a Zoho Creator application. The application is titled 'flight reservation system' and is in 'Development' mode. The left sidebar shows a menu with 'flights' and 'flights Report' (highlighted). The main area displays a table titled 'flights Report' with the following data:

depature time	arrival time	flight number	Single Line	source	destination	flight date
+919876789876	+919345654736	AI809	AI809	Choice 3	Choice 3	08-Aug-2026
+91987654320	+918987654321	AI209	AI209	Choice 2	Choice 2	03-Aug-2026
+917658435675	+919876543210	AI101	AI101	Choice 1	Choice 1	02-Aug-2026

At the bottom of the table, it says 'Showing 3 of 3' and there is a 'Search' button.

Result

A simple **Flight Reservation System** was successfully created using **Zoho Creator**. The application allows users to enter passenger and flight details, check seat availability, calculate the total ticket cost, and manage reservations through a cloud-based SaaS application.

EXPERIMENT NO: 2

2. Create a simple cloud software application for Property Buying & Rental process (In Chennai city) using any Cloud Service Provider to demonstrate SaaS

Aim

To create a simple **Property Buying and Rental System for Chennai City** using **Zoho Creator** as a cloud service provider to demonstrate the **Software as a Service (SaaS)** model, allowing users to view property details, select buying or rental options, calculate the total cost, and manage property transactions online.

Procedure

1. Login to Zoho Creator

- Open [Zoho Creator](#).
- Log in using a Zoho account.
- Create a new application.

2. Create the Property Management Application

- Select **Create Application**.
- Give the application name as **Property Buying & Rental System**.
- Choose a blank application.

3. Create the Property Details Form

- Create a form named **Property Details**.
- Add the following fields:
 - Property ID
 - Property Type
 - Location
 - Area in Sq.ft
 - Bedrooms

- Property Status
- Transaction Type
- Property Price
- Monthly Rent
- Owner Name
- Contact Number

4. Enter Chennai Property Details

- Add sample properties located in Chennai.
- Example locations:
 - Anna Nagar
 - Velachery
 - Tambaram
 - Adyar
 - Porur

5. Create the Customer Form

- Create another form named **Customer Details**.
- Add:
 - Customer Name
 - Phone Number
 - Email
 - Address
 - Property ID
 - Transaction Type
 - Required Date

6. Create the Property Transaction Form

- Create a form named **Property Transaction**.
- Add:
 - Customer Name
 - Property ID
 - Transaction Type
 - Property Price
 - Monthly Rent
 - Duration in Months
 - Total Cost
 - Transaction Status

7. Calculate Total Cost

- Use **Deluge Script** in Zoho Creator.
- For a rental property:

Total Cost = Monthly Rent × Number of Months

- For buying:

Total Cost = Property Price

8. Check Property Availability

- Check the property status before completing the transaction.
- If the property is already sold or rented, display:

"Property is not available."

- Otherwise, allow the transaction to continue.

9. Update Property Status

- After a successful purchase, change the property status to **Sold**.

- After a successful rental, change the status to **Rented**.

10. Create a Property Report

- Create a report to display available and unavailable properties.
- Include:
 - Property ID
 - Property Type
 - Location
 - Area
 - Price
 - Monthly Rent
 - Property Status

11. Create a Transaction Report

- Create a report to display completed transactions.
- Include:
 - Customer Name
 - Property ID
 - Transaction Type
 - Duration
 - Total Cost
 - Transaction Status

12. Test the Application

- Enter property details.
- Search/select a Chennai property.
- Choose **Buy** or **Rent**.

- Enter the required rental duration if applicable.
- Verify the total cost.
- Check property availability.
- Submit the transaction.
- Verify that the property status is updated.

13. Deploy the Application as SaaS

- Zoho Creator hosts the application on the cloud.
- The application can be accessed through the internet without installing software on the user's computer.
- This demonstrates the **SaaS model**, where the software is delivered to users as an online cloud service.

PROPERTY BUYING AND RENTAL

PROPERTY BUYING AND RENTAL

PROPERTY BUYING AND RENTAL

PROPERTY BUYING AND RENTAL Report

PROPERTY BUYING AND RENTAL Report

+

...

	CUSTOMER NAME	PROPERTY NAME	PROPERTY PRICE	ADVANCE AMOUNT	MONTHLY RENT	RENTAL MONTHS	TOTAL COST
	LAKSHAN	GREEN VALLEY APARTMENTS	₹ 5,00,000.00	₹ 65,000.00	₹ 35,000.00	12	₹ 4,20,000.00
	SHRUTHIKA	URBAN NEST	₹ 4,00,000.00	₹ 60,000.00	₹ 30,000.00	12	₹ 3,40,000.00
	UGESH	SAI PARADISE	₹ 5,00,000.00	₹ 40,000.00	₹ 20,000.00	12	₹ 2,80,000.00

Result

A simple **Property Buying & Rental System for Chennai City** was successfully created using **Zoho Creator**. The application allows users to manage property details, check availability, select buying or rental options, calculate the total cost, and maintain transaction records through a cloud-based **SaaS application**.

EXPERIMENT NO: 3

3. Create a simple cloud software application for Car Booking Reservation System using any Cloud Service Provider to demonstrate SaaS.

Aim

To create a simple **Car Booking Reservation System** using **Zoho Creator** as a cloud service provider to demonstrate the **Software as a Service (SaaS)** model, allowing users to view available cars, enter customer details, book a car, check availability, and calculate the total booking cost through an online cloud application.

Procedure

1. Login to Zoho Creator

- Open [Zoho Creator](#).
- Log in using a Zoho account.
- Create a new application.

2. Create the Car Booking Application

- Select **Create Application**.
- Give the application name as **Car Booking Reservation System**.
- Choose a blank application.

3. Create the Car Details Form

- Create a form named **Car Details**.
- Add the following fields:
 - Car ID
 - Car Name
 - Car Model
 - Car Type
 - Registration Number

- Seating Capacity
- Price Per Day
- Availability Status

4. Enter Sample Car Details

- Add some cars to the form.
- Example:
 - Car ID: C101
 - Car Name: Toyota
 - Car Model: Innova
 - Car Type: SUV
 - Seating Capacity: 7
 - Price Per Day: \$50
 - Availability: Available

5. Create the Customer Booking Form

- Create a form named **Car Booking**.
- Add:
 - Booking ID
 - Customer Name
 - Phone Number
 - Email
 - Car ID
 - Pickup Location
 - Drop Location
 - Booking Date

- Number of Days
- Price Per Day
- Total Cost
- Booking Status

6. Calculate the Total Booking Cost

- Use **Deluge Script** in Zoho Creator.
- Calculate the total cost using:

Total Cost = Price Per Day × Number of Days

- For example, if the car costs **\$50 per day** and the customer books it for **3 days**:

Total Cost = \$50 × 3 = \$150

7. Check Car Availability

- Check the **Availability Status** of the selected car.
- If the car is not available, display:

"Car is not available."

- If the car is available, allow the customer to complete the booking.

8. Update Car Availability

- After a successful booking, change the car's status from **Available** to **Booked**.
- This prevents the same car from being booked again while it is reserved.

9. Create a Car Details Report

- Create a report to display all cars.
- Include:
 - Car ID
 - Car Name
 - Car Model

- Car Type
- Price Per Day
- Availability Status

10. Create a Booking Report

- Create a report to display all bookings.
- Include:
 - Booking ID
 - Customer Name
 - Car ID
 - Booking Date
 - Number of Days
 - Total Cost
 - Booking Status

11. Test the Application

- Enter car details.
- Enter customer details.
- Select an available car.
- Enter the number of booking days.
- Check car availability.
- Calculate the total booking cost.
- Submit the booking.
- Verify that the car status changes to **Booked**.
- Check the booking in the report.

12. Deploy the Application as SaaS

- Zoho Creator hosts the application in the cloud.
- Users can access the application through the internet without installing the software locally.
- This demonstrates the **SaaS model**, where the complete software application is provided as an online cloud service.

car number	car model	location	price	available car	availability
TN24BU6787	THAR	Choice 3	₹ 5,000.00	2	Choice 2
TN09AB1234	TOYATA	Choice 3	₹ 2,500.00	8	Choice 1

Result

A simple **Car Booking Reservation System** was successfully created using **Zoho Creator**. The application allows customers to view available cars, enter booking details, check car availability, calculate the total booking cost, and manage reservations through a cloud-based **SaaS application**.

EXPERIMENT NO:4

4.Create a simple cloud software application for Library book reservation system for SIMATS library using any Cloud Service Provider to demonstrate SaaS

Aim

To create a simple **Library Book Reservation System for SIMATS Library** using **Zoho Creator** as a cloud service provider to demonstrate the **Software as a Service (SaaS)** model, allowing students to search for books, check availability, reserve books, and manage reservation details through an online cloud application.

Procedure

1. Login to Zoho Creator

- Open [Zoho Creator](#).
- Log in using a Zoho account.
- Create a new application.

2. Create the Library Application

- Select **Create Application**.
- Give the application name as **SIMATS Library Book Reservation System**.
- Choose a blank application.

3. Create the Book Details Form

- Create a form named **Book Details**.
- Add the following fields:
 - Book ID
 - Book Name
 - Author Name
 - Category
 - ISBN

- Total Copies
- Available Copies
- Book Status

4. Enter Book Details

- Add sample books available in the SIMATS Library.
- Example:
 - Book ID: B101
 - Book Name: Database Management Systems
 - Author Name: R. Elmasri
 - Category: Computer Science
 - Total Copies: 5
 - Available Copies: 3
 - Book Status: Available

5. Create the Student Details Form

- Create another form named **Student Details**.
- Add:
 - Student ID
 - Student Name
 - Department
 - Year
 - Email
 - Phone Number

6. Create the Book Reservation Form

- Create a form named **Book Reservation**.

- Add:
 - Reservation ID
 - Student ID
 - Student Name
 - Book ID
 - Book Name
 - Reservation Date
 - Return Date
 - Reservation Status

7. Check Book Availability

- When a student selects a book, check the **Available Copies** field.
- If available copies are greater than 0, allow the reservation.
- If no copies are available, display:

"Book is not available for reservation."

8. Update Available Copies

- After a successful reservation, reduce the available copy count by 1.
- For example:

Available Copies = Available Copies – 1

9. Set Reservation Status

- If the book is successfully reserved, set the status as:

"Reserved"

- If the book is unavailable, set the status as:

"Not Available"

10. Create a Book Report

- Create a report named **Book Availability Report**.
- Display:
 - Book ID
 - Book Name
 - Author
 - Category
 - Total Copies
 - Available Copies
 - Book Status

11. Create a Reservation Report

- Create a report named **Reservation Report**.
- Display:
 - Reservation ID
 - Student ID
 - Student Name
 - Book ID
 - Book Name
 - Reservation Date
 - Return Date
 - Reservation Status

12. Test the Application

- Enter student details.
- Select a book.
- Check whether the book is available.

- Submit the reservation.
- Verify that the reservation status changes to **Reserved**.
- Check whether the available copy count is reduced by 1.
- Verify the reservation in the Reservation Report.

13. Deploy as SaaS

- Zoho Creator hosts the application on the cloud.
- Students and library staff can access the application through the internet.
- No separate software installation is required on individual computers.
- Thus, the application demonstrates the **Software as a Service (SaaS)** model.

BOOK ID	BOOK NAME	AUTHOR	COPIES	STATUS
B003	ARTIFICIAL INTELLIGENCE	RUSSELL	2	AVAILABLE
B001	OPERATING SYSTEM	GALVIN	3	NOT AVAILABLE
B001	DATABASE SYSTEM	KORTH	5	AVAILABLE

Result

A simple **SIMATS Library Book Reservation System** was successfully created using **Zoho Creator**. The application allows students to enter their details, search and check book availability, reserve books, and maintain reservation records through a cloud-based **SaaS application**.

EXPERIMENT NO:5

5. Create a simple cloud software application for product selling using any cloud service provider to demonstrate saas.

Aim

To create a simple **Product Selling Application** using **Zoho Creator** as a cloud service provider to demonstrate the **Software as a Service (SaaS)** model, allowing customers to view products, enter order details, calculate the total cost, and manage product sales through an online cloud application.

Procedure

1. Login to Zoho Creator

- Open [Zoho Creator](#).
- Log in using a Zoho account.
- Create a new application.

2. Create the Product Selling Application

- Select **Create Application**.
- Give the application name as **Product Selling System**.
- Choose a blank application.

3. Create the Product Details Form

- Create a form named **Product Details**.
- Add the following fields:
 - Product ID
 - Product Name
 - Category
 - Price

- Available Quantity
- Product Status

4. Enter Product Details

- Add sample products.
- Example:
 - Product ID: P101
 - Product Name: Wireless Mouse
 - Category: Electronics
 - Price: \$20
 - Available Quantity: 10
 - Product Status: Available

5. Create the Customer Order Form

- Create another form named **Product Order**.
- Add:
 - Order ID
 - Customer Name
 - Phone Number
 - Email
 - Product ID
 - Product Name
 - Quantity
 - Price Per Unit
 - Total Cost
 - Order Status

6. Calculate the Total Cost

- Use **Deluge Script** in Zoho Creator to calculate the total cost.
- Use the formula:

Total Cost = Quantity × Price Per Unit

- Example:

Quantity = 3

Price Per Unit = \$20

Total Cost = 3 × \$20 = \$60

7. Check Product Availability

- Check the available quantity before accepting the order.
- If the requested quantity is greater than the available quantity, display:

"Product is not available in the required quantity."

- Otherwise, allow the order to proceed.

8. Update Product Quantity

- After a successful order, reduce the available quantity.
- Use:

Available Quantity = Available Quantity – Ordered Quantity

- If the available quantity becomes 0, change the product status to **Out of Stock**.

9. Create a Product Report

- Create a report named **Product Details Report**.
- Display:
 - Product ID
 - Product Name
 - Category
 - Price

- Available Quantity
- Product Status

10. Create an Order Report

- Create a report named **Sales Order Report**.
- Display:
 - Order ID
 - Customer Name
 - Product Name
 - Quantity
 - Price Per Unit
 - Total Cost
 - Order Status

11. Test the Application

- Enter product details.
- Enter customer details.
- Select a product.
- Enter the required quantity.
- Check product availability.
- Calculate the total cost.
- Submit the order.
- Verify that the product quantity is updated.
- Check the order in the Sales Order Report.

12. Deploy as SaaS

- Zoho Creator hosts the application on the cloud.

- Customers and administrators can access the application through the internet.
- No separate software installation is required.
- Thus, the application demonstrates the **Software as a Service (SaaS)** model.

PRODUCT NAME	PRICE	QUANTITY	TOTALCOST
KEYBOARD	₹ 3,000.00	2	₹ 6,000.00
HEADPHONES	₹ 500.00	3	₹ 1,500.00
LAPTOP	₹ 80,000.00	2	₹ 1,60,000.00

Result

A simple **Product Selling Application** was successfully created using **Zoho Creator**. The application allows customers to view products, check product availability, place orders, calculate the total cost, and maintain sales records through a cloud-based **SaaS application**.
